

Breathe Into Your Massage

Mindful Breathing Enhances Bodywork Benefits

Cathy Ulrich

During her massage, Elaine was having trouble relaxing, continually talking about all of the stressors in her life. I took a deep breath and asked her to do the same. Suddenly, her body relaxed and I finally felt her respond to the work I was doing. So, what shifted with that simple suggestion?

In The Moment

Elaine was thinking about the stresses in her life instead of where she was at the moment. She was in a safe space, receiving gentle, supportive bodywork. And yet she couldn't relax. By simply asking her to be mindful of her breath, she immediately felt her body and became present with me in that space.

control labor pain. By consciously breathing during contractions, they learn to shift the feeling of pain to just sensation.

Elaine came to see me because she had chronic pain in her foot, knee, and hip. Often chronic pain sets up as a vicious cycle of muscle tightness, impaired blood flow, and more pain, even in areas distant from the original problem. When I asked Elaine to send her breath to the foot, she changed her feeling of pain to simply sensation and this opened a door that allowed me to change the holding pattern in her tissue.

Of course she couldn't physically breathe into her foot, but the imagery of

Take care of your body. It's the only place you have to live.

-Jim Rohn

Mindful breathing brings an individual back into their body, facilitating presence and relaxation.

Many meditation traditions use the breath to quiet the mind. With mindful breathing, we're suddenly thrust into an awareness of our inner spaces and a feeling that we actually do live in a body.

Reduce Pain

One of the first things expectant mothers learn in natural childbirth classes is breathing techniques to help

sending warm, healing breath into her foot from the inside while I worked on it from the outside changed her relationship to the pain.

Try this simple technique yourself. As you tune into your breath, notice your body. Is there discomfort or pain?

Breathe Into Your Massage
Lavender
Hot or Cold for Injuries?

Continued from page 1

Breathe in, and think of filling your lungs with healing oxygen. Now breathe out, and imagine sending this warm, healing oxygen directly to the place that hurts. Continue gently breathing into the area for a few minutes. What does it feel like now?

Relieve Stress

When I worked with Elaine, I noticed that the more she talked about her stressful life, the shallower her breath became. She was breathing high in her chest in short, rapid breaths. Her mind had transported her back to her stressful life, even though she was in a place where she was supported and encouraged to take a break from that stress, putting her body into a fight-or-flight response.

One clear manifestation of this is rapid, shallow breathing. While stress can produce this breathing pattern, the good news is that we can consciously change the breathing pattern and reduce the stress. It works both ways.

As I asked Elaine to slow her breathing and take deeper breaths, the tension in her face softened. Her body relaxed on the table as if she were sinking into the padding. Her feet became warmer, a sure sign that her circulation had changed and that her nervous system had switched from fight or flight to the calming mode of rest and digest.

Try this for yourself. The next time you're feeling stressed, stop for a moment and notice how you're breathing. Is your breath high in your chest? Is it fast and shallow? Now, gently invite your breath to slow down. Start to pull breath into your lungs by letting your belly relax and expand as you inhale. Spend a few moments with yourself and your breath and look at the stressful situation again. Does it seem so bad now?

Your Massage

Receiving a massage does involve participation on the client's part. While the practitioner is the expert on the bodywork, the clients are the experts on their bodies. In our culture, the client/therapist relationship is often a check-your-body-at-the-door affair. But so much more can happen when the client works with the therapist.

The next time you go for a massage, try these suggestions to achieve mindful breathing and enhance the benefits of your session:

- As you settle onto the table, feel the weight of your body on the table and begin to notice your breath.

- Feel your breath moving of its own accord. Where is it most noticeable? Bring into the spaces that feel less full (without effort--just invite).

- When your therapist starts working, notice the pressure and rhythm. When your practitioner lets up on the pressure, breathe in. When she/he applies pressure, breathe out.

- If your practitioner comes to a tender area, pay special attention to your breath. Work with the tenderness on the exhale, imagining that you're

breathing out the pain.

- As your therapist works on different areas, imagine your breath moving there to meet her. Send your breath wherever she is working. Let her work on the outside, you work on the inside.

- Notice the changes as the massage progresses. Notice your thought patterns. Notice your comfort level. Notice your stress (and how it melts) as you send breath to the various areas of your body.

- When your session is complete and you sit up, notice how your breath feels. What do you notice about your body, the room, the light?

Why not use the lifegiving force of breath to make your next massage an even more beneficial experience. Just breathe.

Being actively aware of your breath during a massage enhances the benefits of your session.

Lavender

An Essential Oil for Fundamental Health

Laurie Chance Smith

Lavender essential oil is a one-stop medicine chest, helping to reduce anxiety, fatigue, and stress and balance hormones, increase the immune response, lower blood pressure, and relieve pain. To utilize lavender's healing benefits at home, mix five to 10 drops of lavender essential oil in one ounce of jojoba oil or unscented lotion. (Essential oils shouldn't be applied directly to the skin; it's best to partner them with a carrier oil, liquid, or lotion.)

EARACHES

For earaches, dab one drop of lavender massage oil behind the ear and rub gently. Alternatively, place one drop of lavender oil on a cotton ball and carefully place inside the outer ear.

HEADACHES

Inhaling lavender is also effective for headache relief. Add a few drops to a bowl of warm water and breathe. Gently rub lavender massage lotion on the temples, forehead, and base of the neck.

COLDS

Lavender oil can also help break up coughs and clear sinuses. Colorado-based holistic aromatherapist Nicola McGill suggests the regular home-use of antiseptic essential oils such as lavender to help avoid colds and other infectious diseases. Add a few drops to a vaporizer to help clear colds and infuse the home with lavender's scent.

STRESS

At night, six to eight drops of lavender added to a warm bath helps melt away stress and relieve fatigue. Blend a footbath by adding three drops of lavender to a bowl of warm water, sink your feet in, and relax. For help inducing sleep, add two or three drops of lavender essential oil to the underside corner of your pillow.

TRANQUIL AROMA

A human takes 23,040 breaths a day, and each inhale floods the system with scent. Rely on lavender's tranquil aroma to clear the way toward peaceful days.

Lavender is loaded with wellness properties.

Hot or Cold for Injuries?

How to Know Which is Best for You

Art Riggs

We all know that treating an injury immediately after it happens can help minimize the pain and damage as well as facilitate recovery. But after rolling your ankle in a soccer game, or hurting your back when lifting your toddler, or tweaking your knee when stepping out of your car, what's best? Should you ice it to try to control inflammation, or would heat be better to promote circulation?

While it's difficult to establish a fail-safe rule for when to apply ice or heat, the general directive is to use ice for the first forty-eight to seventy-two hours after an acute injury and then switch to heat.

It Depends

The reality is that many conditions are not necessarily the result of a specific

injury. I call these conditions "recurrent acute" and find them by far the most common: sciatica that occurs when you drive a car; a back that flare up every time you garden; or tennis elbow from intense computer work. In these cases, consistent and frequent applications of ice may prove very helpful over long periods of time, particularly immediately after experiencing the event that causes problems.

Conversely, back or other muscle spasms caused by overexertion rather than injury may benefit greatly from heat immediately upon the onset of symptoms or immediately after exercise in order to relax the muscles and increase circulation. Also, muscle belly pain not resulting from acute and

serious trauma generally responds well to heat, which can break the spasms and release the strain. On the other hand, nerve and tendon pain--regardless of the duration of symptoms, even if you've been experience them for months--benefit from ice.

What Works for You

The bottom line: different individuals will constitutionally vary greatly in their reactions. Some people are more prone to the types of inflammation exacerbated by heat, while others find their bodies contracting and tightening at the mere mention of ice. Try each option and pay close attention to how your body and mind respond, and let your gut be your guide. Ultimately, what works best for you is, well, what's best for you.
